the hand of man

From landscapes shaped by man to barely visible traces of his presence in nature, the world has always been sculpted and altered in various ways by man. Verdant paddy-fields in Asia, salt marshes in Africa, quarries and fields of windmills throughout the world... the presence of man can be seen everywhere, whether you take a close-up look or gaze from a distance. Through 100 incredible photographs, **The Hand of Man** offers a breathtaking view of the traces man has left in nature and pays tribute to these eternal sculptors.
